ZERO CONFIGURATION

01

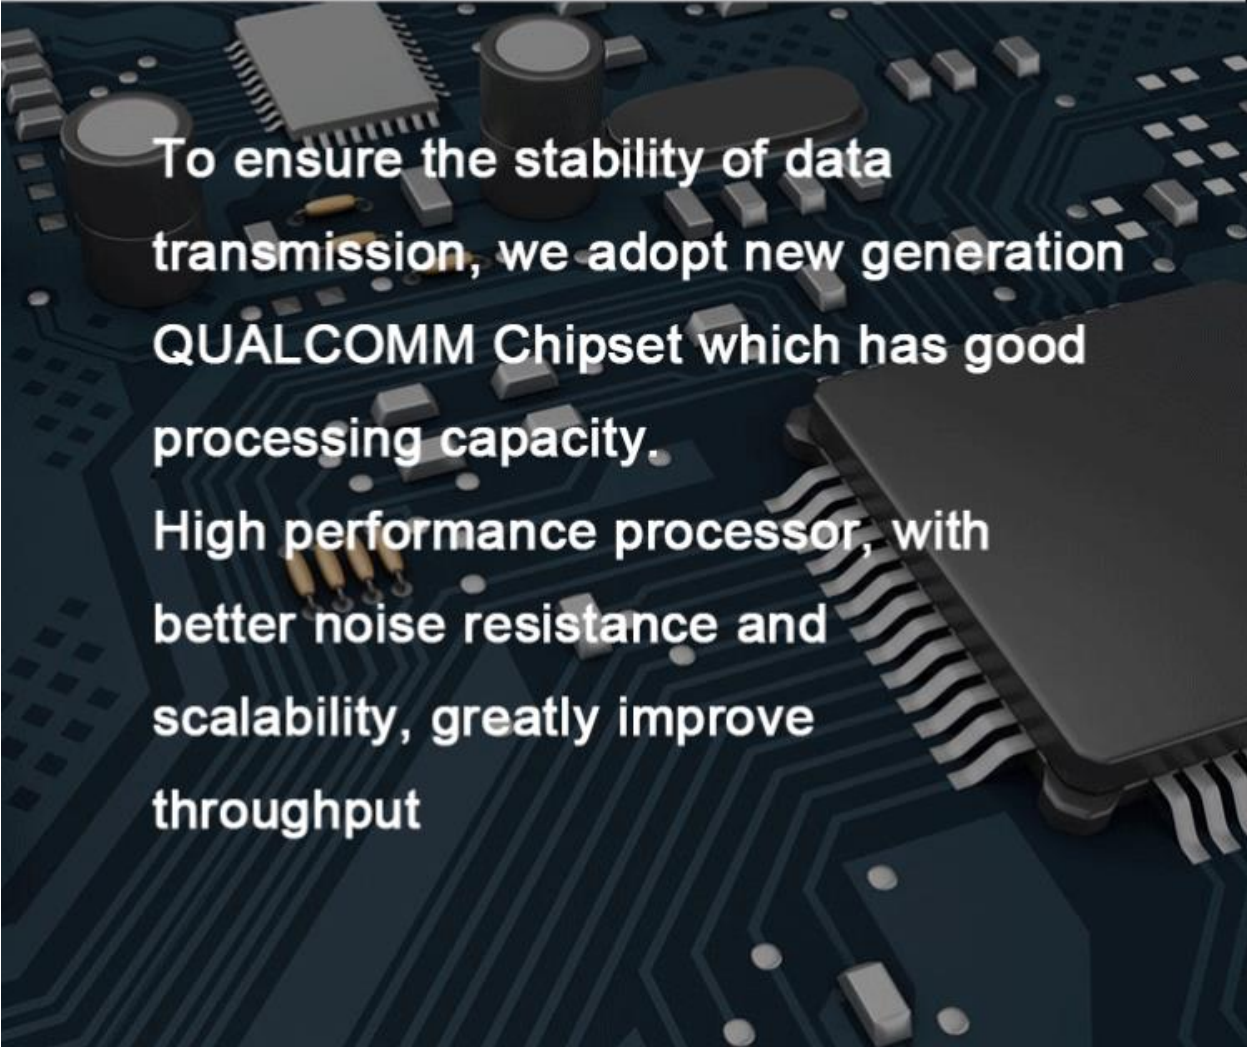

FASHION DESIGN

The design conforms to
fluid mechanics

02

STABILITY IS KEY

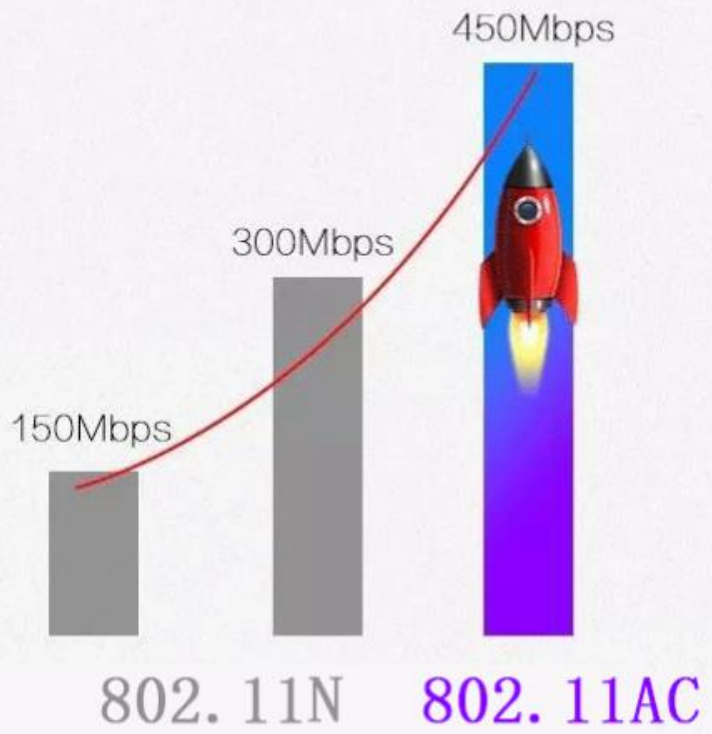

To ensure the stability of data transmission, we adopt new generation QUALCOMM Chipset which has good processing capacity.

High performance processor, with better noise resistance and scalability, greatly improve throughput

03

FASTER

04

MORE DEVICES

IEEE802.11ac wireless technology,
higher bandwidth and faster transmission.

In the transmission of 15 HD IP cameras,
the screen does not drop and smoothly.

05

MORE STABLE

06

DIAL-UP NON-SETTING

128 groups of unified networking
Smarter management

The AP upgrades the 10-digit dialing button to automatically match 128 sets of IP addresses. Avoid various connection problems caused by IP addresses! More stable to use

Dial-Up design, no need of complicated computer setting
Debug hundreds of wireless bridges at the same time.
It's easier and faster to use!

A monitoring system can set up 128 monitoring points (transmitting end).
Meet the wireless transmission needs of more different environments! The setup is easier!
